SARS-CoV2 (COVID-19) Real Time RT PCR Test

Type of Sample : Nasopharyngeal Swab in Viral Transport Medium

Sample Condition of Receipt : OK, Cold chain followed

SARS-CoV2 (COVID-19) PCR Test : **NEGATIVE**

Positive and Negative controls for all the three genes were satisfactory

Note:

1. Testing of referred clinical specimens was considered on the basis of request /referral received from through state surveillance officer (SSO) of concerned state integrated disease surveillance program (IDSP)/ any other healthcare facility affirming requirements of the case definitions.
2. The result pertains only to the specimen tested and should be correlated with clinical findings,
3. A single negative test result particularly if this is from an upper respiratory tract specimen does not exclude infection.
4. A positive test result is only tentative and will be reconfirmed by retesting.
5. Sample collected and testing will be done only on the basis of valid prescription provided by authorized registered medical practitioner or concerned state authority doctors only.
6. Repeat sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2-4 days after the collection of the first specimen for additional testing if required. A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of co-infections.
7. Please note that these results are not to be used for any thesis or presentations or for publications in journal, print, or electronic media without the prior written permission of the Director General, ICMR.
8. We will share all the patient reports with the defined Govt. bodies as per the guidelines of Govt. of India/ICMR.
